

BloodLink — Bug Report Template

Project: BloodLink v2.0 — Blood Bank Management & Intelligent Donor Matching System

Document Type: QA Artifact — Reusable Bug Report Template

Prepared by: QA Team

Date: May 2026

1. Purpose

This template provides a **standardized format** for documenting software defects discovered during the testing of the BloodLink system. All team members should use this template when filing bug reports to ensure consistency, traceability, and efficient resolution workflows.

2. Severity Levels

Level	Label	Definition
	Critical	System crash, data loss, security vulnerability, or core feature completely broken. Blocks testing.
	High	Major feature is not working as expected. Has a workaround but significantly impacts usability.
	Medium	Minor feature defect or UI issue. Does not block core functionality.
	Low	Cosmetic issue, typo, or minor UX improvement. No functional impact.

3. Priority Levels

Priority	Label	Response Time
P1	Immediate	Must be fixed within 24 hours

Priority	Label	Response Time
P2	Next Sprint	Scheduled for the next development sprint
P3	Backlog	Queued for future resolution
P4	Nice-to-have	Optional improvement, fix when convenient

4. Bug Report Form

Instructions: Copy the table below for each new bug report. Fill in all fields. Attach screenshots or log files as evidence.

Field	Value
Bug ID	BL-BUG-XXX
Title	<i>(Short, descriptive summary of the defect)</i>
Reporter	<i>(Name of the person who found the bug)</i>
Date Reported	<i>(YYYY-MM-DD)</i>
Module / Feature	<i>(e.g. Login, Inventory, Emergencies, Donors, Notifications, Dashboard)</i>
Severity	● Critical / ● High / ● Medium / ● Low
Priority	P1 / P2 / P3 / P4
Status	New / Open / In Progress / Fixed / Verified / Closed / Reopened
Assigned To	<i>(Developer responsible for the fix)</i>
Environment	<i>(OS, Browser, Screen size, Backend version)</i>

4.1 Description

Provide a clear and concise description of the bug. Include what the feature should do and what is going wrong.

4.2 Steps to Reproduce

1. Step 1
2. Step 2
3. Step 3

4.3 Expected Result

What should happen according to the requirements or design specification.

4.4 Actual Result

What actually happens. Include any error messages, console logs, or HTTP status codes.

4.5 Screenshots / Evidence

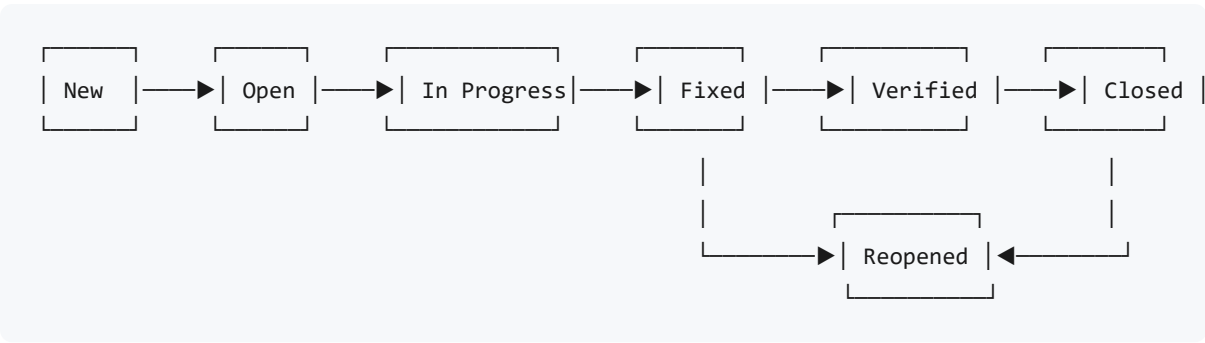

Attach screenshots, screen recordings, browser console logs, or server log outputs.

4.6 Additional Context

Any other information that may help with diagnosis:

- Related bug IDs
 - Workarounds discovered
 - Frequency of occurrence: **Always** / **Intermittent** / **Once**
 - Regression? (Was this working before?)
-

5. Bug Lifecycle

Status	Description
New	Bug has been reported but not yet triaged
Open	Bug has been triaged and confirmed
In Progress	Developer is actively working on a fix
Fixed	Developer has committed a fix, pending QA verification
Verified	QA has confirmed the fix resolves the issue
Closed	Bug is resolved and no further action needed
Reopened	Fix was insufficient; bug has recurred or was not fully resolved

6. Module Reference

The following modules are used in the **Module / Feature** field:

Module	Description	Key Pages
Authentication	Login, logout, JWT token handling	/login
Dashboard	Admin overview, donor dashboard, analytics cards	/
Blood Inventory	CRUD operations on blood stock levels	/inventory
Donor Management	Donor registry, filtering, detail panel	/donors
Emergency Matching	Emergency requests, matching engine, donor notification	/emergencies

Module	Description	Key Pages
Notifications	Alert center, mark-as-read, dismiss, bulk actions	/notifications
User Profile	Profile view/edit, hospital assignment	/profile
Backend API	REST endpoints, validation, database operations	/api/*

7. Blank Template

Field	Value
Bug ID	BL-BUG-
Title	
Reporter	
Date Reported	
Module / Feature	
Severity	● Critical / ● High / ● Medium / ● Low
Priority	P1 / P2 / P3 / P4
Status	New
Assigned To	
Environment
